‘A multitude of fears coupled with excitement’

Children’s nursing students’ experiences of their first practice placement

Mary Brady & Dr. Jayne Price, Rachael Bolland and Dr. Gina Finnerty

HESL 7th July 2015
• First placement instrumental in shaping views about chosen career

• ‘Sense of unease’ with existing preparation for practice, especially first placement

• Evidence from the literature: Melling (2011), NMC(2010)
1. Explore the anxieties experienced by students prior to and during their first practice placement

2. To identify strategies which helped prepare and support students during their first practice placement

3. Explore the perspective of professional staff regarding how the anxieties of student nurses prior to their first practice placement can be addressed
CHiPP objectives

1. Explore the anxieties experienced by students prior to and during their first practice placement

2. To identify strategies which helped prepare and support students during their first practice placement
Data collection

Part 1: Self-administered, questionnaire from 21 children’s nursing students prior to their first placement

Part 2: A focus group was held with 5 students following the placement using the Nominal Group technique
Data from questionnaires (n=21)

• **Excitement**
  – Contact with placement
  – Pre placement visits
    • Investigating type of children
    • Reading around illnesses

• **Anxiety**
  – Appear helpful and get things right
  – PAD

• **Concerns**
  – Fitting in and getting on with mentor
  – Making mistakes
  – Professionalism

• **Ownership**
  – My mentor
  – My placement

• **Use of ‘jargon’**
  – Doing the ‘obs’
### Data from focus group (n=5)

“…one previous student… she came into one of our learning practice sessions … and she gave us loads of information … like she brought some bubbles ‘cos that really does work… so previous students from last year about their anxieties, that really helped me as well”

Ownership: “…My placement was great…” , “My health visitor”
“My placement”

Fear: I was at a children’s centre and so… it’s not a ward based thing but they all really welcomed so that …obliterated my fears anyway…

“We knew which days she (mentor) was going to be in & she planned from the first day when we’d …sign off PADs … so that was really nice …instead of trying to chase her for when it’s going to be done.

HESL 7th July 2015
“My placement was amazing, really supportive **mentor**, I actually wasn’t with my **mentor** all the time … but … I quite liked that because in the environment that I was in I felt like if she was with me all the time felt like I’d be being watched, and I wouldn’t have been able to be as comfortable to just get on with interacting with the children as much”

“…**My mentor** was always with me, not too much but … the last two weeks she … grew confident…in me, “Oh do you want to lead this session, you know what to do, and that was quite helpful, for someone to actually believe in me … a lot of support which I felt was quite strong”

“I was very, very anxious but my **mentor** was very, very nice, we just connected straightaway, it was like magic, very, very helpful”

“My **mentor** had a rota …for both me and the other students … knew… we’d always be in the nurseries in the morning, but in the afternoon for almost every day she’d give us something else to do…and she’d rotate us each week… even though we had a rota, it wasn’t rigid, we could change things if we wanted to…so that was really supportive and … she planned from the first day when we’d sign off our pads …”

HESL 7th July 2015
Conclusions

• Students develop a sense of ownership of their experience

• Joint preparation helped buffer their anxiety

• Peer support & knowledge sharing through senior student in a preparation for practice session is a clear recommendation

• A welcoming, interested mentor contributed to positive learning experience
Thank you and any questions?
